Specifications:

Heat Plate Dimensions	4.8" x 14.8"
Power Supply	110V
Power	185 watts
Max Width	17.7"
Dimensions	19.8" x 23.6" x 5.2"
Weight	15lbs

Easy to Use

Plug in power supply and push main switch to "ON." The pilot lamp will light. Wait several minutes for the blade and plate to warm-up. Use the thermostat to control the temperature of the heat plate. Put the package on the work table, draw the film, & wrap the package with the film extending to the bottom. Pull the film forward and cut using the heat blade by pushing down. Press cut film against the bottom of the package. Fold down the edges of the film by hand and press the entire package bottom against the heat plate.
