

For sealing irregular packages

- 10" heated bar
- Ideal for sealing irregular packages
- Economically priced unit
- Optional 12" working mat is available

More Details:

The WT-250 portable sealer is ideal for sealing irregular items especially with the sealer's direct flat heated bar that measures about 10" x 1.5". Because this sealer is direct heat, the heat wand can be used on coated aluminum foil, poly cello films, coated Kraft papers, waxed paper, cellophane, mylar, coated PP, and other thicker materials. We do not recommend this unit for sealing polyethylene. The sealer is constructed of durable metal with insulated wooden handgrip.

Please DO NOT touch the bars of the sealer until it has cooled down. An optional insulated mat (part# HW-13) is available to purchase with the WT-250 sealer.

Easy to Operate: Depending on the material, allow 5-15 minutes of warm up time for the sealer to reach the desired temperature.

Features:

Power Supply	110V or 220V
Power Cord Length	5ft
Handle Length	6.2"
Heating Blade Dimensions	10"L x 1.5"W x 3mm (Thickness)
PTFE Mat (Optional)	11 ¾" x 11 ¾" (HW-13)
Temperature	~350°F
Weight	13oz
Shipping Dimensions	13" x 10" x 5"
