

Hot Stamp INK RIBBON / CODING FOIL

Our **Hot Stamping Ink Ribbon / Coding Foil** are used to stamp various markings on product packaging by means of a coding device. These markings provide consumers with important information, such as expiration date, production date, weight, or price.

Hot stamping is a thermal bonding process that results in permanent adhesion of the print to the substrate. Our hot ink ribbons produce superior print quality and scratch resistant prints. The ribbons are suitable for printing on PP/PET/PVC/Aluminum film and other combined film. The inks are nontoxic and heavy-metal free. Tightly wound rolls prevent telescoping.

The rolls are very economical and based on 1/2"-3/4" lengths per print, one roll can produce 6,000-8,000 prints. For use with our imprinters.

Note: Our Ink Ribbon / Coding Foil is comparable to the KURZ Coding Product Line.

SPECIFICATIONS	IT-RB-25	IT-RB-30
Width	0.977" / 25mm	1.172" / 30mm
Length	328' / 100meters	328' / 100meters
Temperature	248°F – 302°F (120°C -150°C)	
Available Colors	Black, Blue, Gold, Red, White	Black, Blue, Red
